PROFESSIONAL PROFILE

Developer focused on building internal tools, workflow automation, and operational software for real teams. I observe manual processes, identify bottlenecks, and turn them into practical systems that keep being used after delivery. Built private tools for clinics and small businesses, including a dental management PWA with 100+ patients, a Python reporting app with 300+ generated spirometry reports, and an Excel-based operations system handling 3,000+ yearly appointments.

EXPERIENCE

Software & Automation Developer

2025 - Present

Freelance projects, internal tools, and real clinic systems

- Observed paper-based and spreadsheet-heavy workflows, gathered user feedback, and translated operational friction into deployable internal tools.
- Built a private PWA for appointment and patient management, used daily by one dentist and two secretaries, with 100+ registered patients, appointments, payments, insurance data, odontogram, and arrival alerts.
- Developed a Python desktop app for spirometry reports, generating 300+ reports and reducing repetitive document creation from hours to minutes.
- Delivered and implemented an Excel-based clinic operations system, tracking 3,000+ annual appointments with automatic balances, summaries, and workflow controls.

SELECTED PROJECTS

Dental Appointment & Patient System

Next.js, TypeScript, Supabase, PWA, Telegram Bot API

Production internal system for a private clinic, used daily by one dentist and two secretaries to manage patients, appointments, payments, insurance, notifications, and clinical records.

Spirometry Report Generator

Python, CustomTkinter, python-docx, pandas, openpyxl

Desktop automation tool used at work to generate Word-based medical reports. 300+ reports generated, replacing hours of repetitive manual work with a few guided steps.

Job Application Copilot

Next.js, TypeScript, Supabase, OpenAI

Workflow assistant that analyzes job descriptions, scores fit, highlights red flags, recommends project evidence, and helps organize applications without automating spammy submissions.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL, JavaScript

Automation & tooling: internal tools, workflow automation, API integrations, report generation, openpyxl, python-docx, Excel advanced formulas

Web & backend: Next.js, React, Tailwind CSS, FastAPI, Supabase, PostgreSQL, PWA

Data handling: Pandas, data cleaning, CSV/Excel processing, operational reporting

EDUCATION

Continuous Technical Training - Python, Automation, Data & Web Development | Practical learning through online courses, technical documentation, and real projects for clinics and clients.

LANGUAGES

Spanish: Native | English: Intermediate - technical reading, documentation, and written communication
