PROFESSIONAL PROFILE

Analyst-oriented developer focused on cleaning data, organizing operational information, and turning manual workflows into measurable reporting systems. I work with SQL, Python, Pandas, and Excel to analyze processes, structure data, generate reports, and support decisions with practical outputs. Built real tools for clinics and small businesses, including systems with 100+ patients, 300+ generated reports, and 3,000+ yearly appointments tracked through operational reporting.

EXPERIENCE

Data & Operations Analyst Developer

2025 - Present

Freelance projects, reporting systems, and real clinic operations

- Analyzed paper-based and spreadsheet-heavy workflows, documented operational bottlenecks, and translated them into structured reporting and internal systems.
- Implemented an Excel-based clinic system tracking 3,000+ yearly appointments, balances, expenses, monthly summaries, and day-to-day finance visibility.
- Built a private dental management PWA with 100+ registered patients, improving data organization across appointments, patient records, payments, and insurance information.
- Developed a Python app that generated 300+ spirometry reports, standardizing repetitive reporting and improving turnaround time from hours to minutes.

SELECTED PROJECTS

Medical Clinic Management System

Excel, advanced formulas, conditional formatting, data validation

Production workbook sold to a clinic for appointment tracking, payments, expenses, monthly summaries, and operational control across 3,000+ yearly appointments.

NexusData AI

Next.js, TypeScript, FastAPI, Python, Pandas

Full-stack platform for cleaning CSV, Excel, and JSON data, reviewing quality issues, querying datasets, exploring insights, and exporting reports with AI assistance.

Spirometry Report Generator

Python, pandas, python-docx, openpyxl

Python desktop application that standardized medical reporting and produced 300+ Word-based reports with fewer manual errors and faster delivery.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript

Data & reporting: Pandas, data cleaning, Excel advanced formulas, Power Query, operational reporting, summary generation, data validation

Analysis & operations: process analysis, metrics tracking, workflow documentation, structured records, information organization

Tools: openpyxl, python-docx, Next.js, React, FastAPI, Supabase, PostgreSQL, Git

EDUCATION

Continuous Technical Training - Data Analysis, Python, Automation & Web Development | Practical learning through online courses, technical documentation, and real projects for clinics and clients.

LANGUAGES

Spanish: Native | English: Intermediate - technical reading, documentation, and written communication
