PROFESSIONAL PROFILE

Developer focused on building internal tools, automation, and data systems for real operational workflows. I observe manual processes, identify bottlenecks, and turn them into practical solutions used after delivery. Built tools for clinics and small businesses, including a dental management PWA with 100+ patients, a Python app with 300+ generated spirometry reports, and an Excel system implemented for clinic operations.

EXPERIENCE

Software & Automation Developer

2025 - Present

Freelance projects, operational automation, and real clinic systems

- Observed paper-based and spreadsheet-heavy clinic workflows, collected user feedback, identified bottlenecks, and translated them into deployable internal tools.
- Built a private PWA for appointment and patient management, used daily by one dentist and two secretaries, with 100+ registered patients, appointments, profiles, payments, insurance data, odontogram, and arrival alerts.
- Developed a Python desktop app for spirometry reports, generating 300+ reports and reducing repetitive document creation from hours of manual work to minutes.
- Delivered and implemented an Excel-based clinic system for appointments and finance, tracking 3,000+ annual appointments with automatic balances and monthly summaries.

SELECTED PROJECTS

Dental Appointment & Patient System

Next.js, TypeScript, Supabase, PWA, Telegram Bot API

Production system used daily by one dentist and two secretaries. Manages 100+ patients, appointments, payments, insurance, odontogram, calendar control, and notifications.

Spirometry Report Generator

Python, CustomTkinter, python-docx, pandas, openpyxl

Desktop app used at work to generate Word-based spirometry reports. 300+ reports generated, reducing repetitive reporting from hours to minutes.

Medical Clinic Management System

Excel, advanced formulas, conditional formatting, data validation

Sold production workbook for clinic appointments and finance, tracking shifts, payments, expenses, monthly summaries, and 3,000+ annual appointments.

NexusData AI

Next.js, TypeScript, FastAPI, Python, Pandas

Full-stack platform for cleaning CSV, Excel, and JSON files, checking data quality, querying datasets, exploring insights, and exporting reports with AI assistance.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL

Data & automation: Pandas, Excel advanced formulas, Power Query, data cleaning, report generation, openpyxl, python-docx

Web & backend: Next.js, React, Tailwind CSS, FastAPI, Supabase, PostgreSQL, PWA

Tools: Git, Vercel, Docker, LLMs applied to development and data analysis

EDUCATION

Continuous Technical Training - Python, Data, Automation & Web Development | Practical training through online courses, technical documentation, and real projects for clinics and clients.

LANGUAGES

Spanish: Native | English: Intermediate - technical reading, documentation, and written communication
